The Problem

Many job seekers in Algeria face difficulties when searching for jobs or using online employment platforms such as Wassit Online.

They may struggle to find clear information, understand application steps, prepare required documents, and identify job offers that match their profiles.

Current platforms are useful, but they often depend on basic search filters and do not always provide personalized guidance or interactive assistance.

Proposed Solution

RequAI proposes a smart recruitment assistant called Requi.

Requi is a chatbot designed to guide job seekers in a simple and interactive way.

Through the platform, users can:

- Ask questions about recruitment procedures.
 - Search for job opportunities.
 - Understand application steps and required documents.
 - Receive personalized job guidance.
 - Improve their profile and CV presentation.
- 

Added Value

For job seekers

Clear Guidance

RequAI helps job seekers understand what to do during the job search process.

Easy Access to Employment Information

Users can quickly find information about job offers, application steps, required documents, and recruitment procedures.

Interactive Assistance

Through Requ, users can ask questions and receive direct, simple, and understandable answers.

Added Value

Personalized Recruitment Support

CV and Profile Improvement

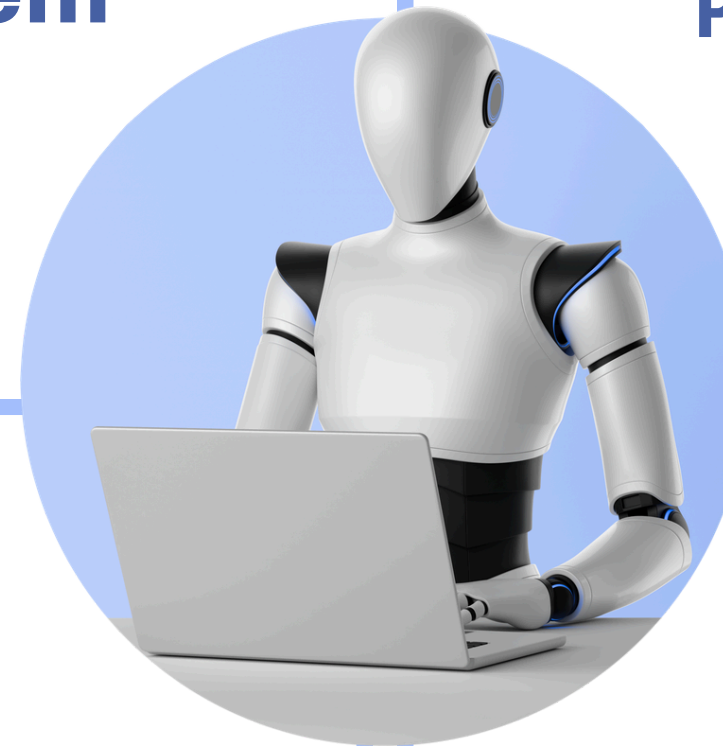

The platform helps users identify their strengths and improve the way they present their skills.

Personalized Job Recommendations

RequAI suggests job opportunities based on the user's profile, skills, preferences, and professional goals.

Time and Effort Reduction

RequAI reduces the time needed to search for information and suitable opportunities.

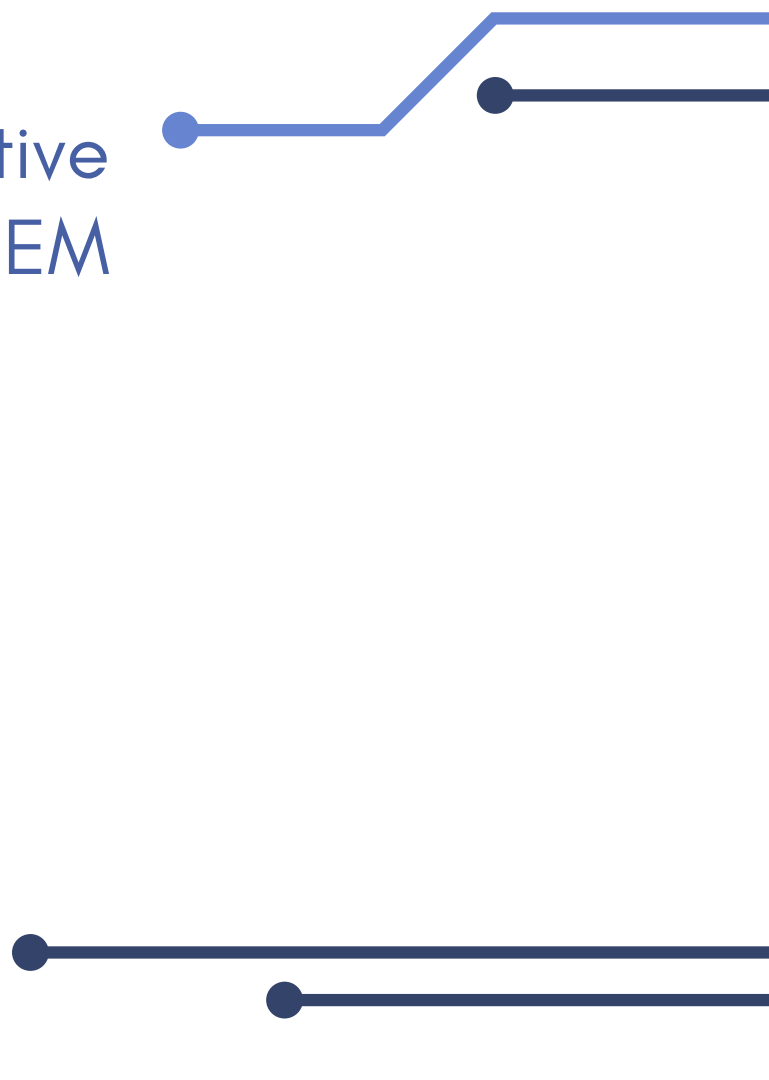

Innovation

RequAI is more than a simple job search platform.

It combines recruitment assistance, chatbot interaction, profile analysis, CV support, skill identification, and job matching in one digital solution.

The innovation is based on providing personalized and interactive guidance adapted to the Algerian employment context, especially ANEM services and Wassit Online.

Business Model Canvas

Key Partners

- ANEM and Wassit Online ecosystem as a potential collaboration environment
- Local employment agencies and recruitment support services
- Training centers and professional development organizations
- Entrepreneurship support programs

Key Activities

- Development and improvement of the RequiAI platform
- Design and maintenance of the Requi chatbot
- Recruitment content preparation and organization
- Data collection, cleaning, organization, and processing
- CV support, skill identification, and job matching assistance
- Prototype testing, validation, and user feedback analysis
- Partnership and communication management

Key Resources

- Web-based platform and chatbot interface
- Recruitment knowledge base and employment guidance content
- AI/NLP tools and job matching support modules
- Recruitment-related data and user profile information
- Skilled team in software engineering, AI, and data processing
- Practical recruitment insights
- Financial resources and workspace

Value Propositions

- Easy access to employment information
- Clear guidance for job seekers
- Interactive assistance through the Requi chatbot
- Personalized job support based on user profiles and skills
- CV and profile improvement support
- Time and effort reduction during job search
- User-friendly digital experience
- Support for employment service digitalization in Algeria

Customer Relationship

- Self-service assistance through the Requi chatbot
- Personalized guidance based on user needs and profiles
- Continuous support for job search and recruitment procedures
- Simple answers to employment-related questions
- Feedback collection to improve the platform
- Regular updates to improve guidance and recommendations

Channel

- Web-based RequiAI platform
- Mobile-friendly chatbot interface
- Social media and digital communication channels
- University events, career clubs, and workshops
- Partnerships with employment agencies and training centers
- Future collaboration with recruitment institutions

Customer Segments

- Job seekers in Algeria
- Young graduates entering the job market
- First-time job seekers needing guidance
- Students preparing for professional integration
- Career clubs and training centers
- Employment agencies and recruitment support services
- Employers and companies in future versions

Cost Structure

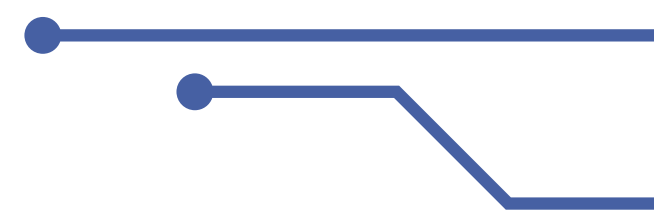

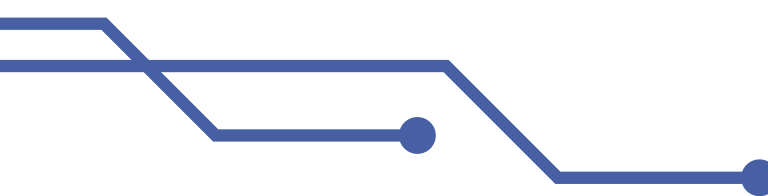

- Platform development, chatbot design, and maintenance costs
- Data collection, processing, and recruitment content preparation costs
- Hosting, domain name, workspace, internet, and technical equipment costs
- Marketing, legal, administrative, support, and update costs

Revenue Stream

- Free basic access for job seekers with paid advanced features
- Premium subscription for personalized job seeker support
- Paid CV and profile improvement services
- Institutional subscriptions for training centers and recruitment support services
- Training and workshops related to job search and platform use
- Custom support or integration for partner organizations
- Future employer-side service packages

Clients

Who are the beneficiaries of the platform?

- Job seekers in Algeria
- Young graduates entering the job market
- First-time job seekers needing guidance
- Students preparing for professional integration
- Career clubs and training centers
- Employment agencies and recruitment support services
- Employers and companies in future versions

Project Growth

Service

Launch
Phase

User

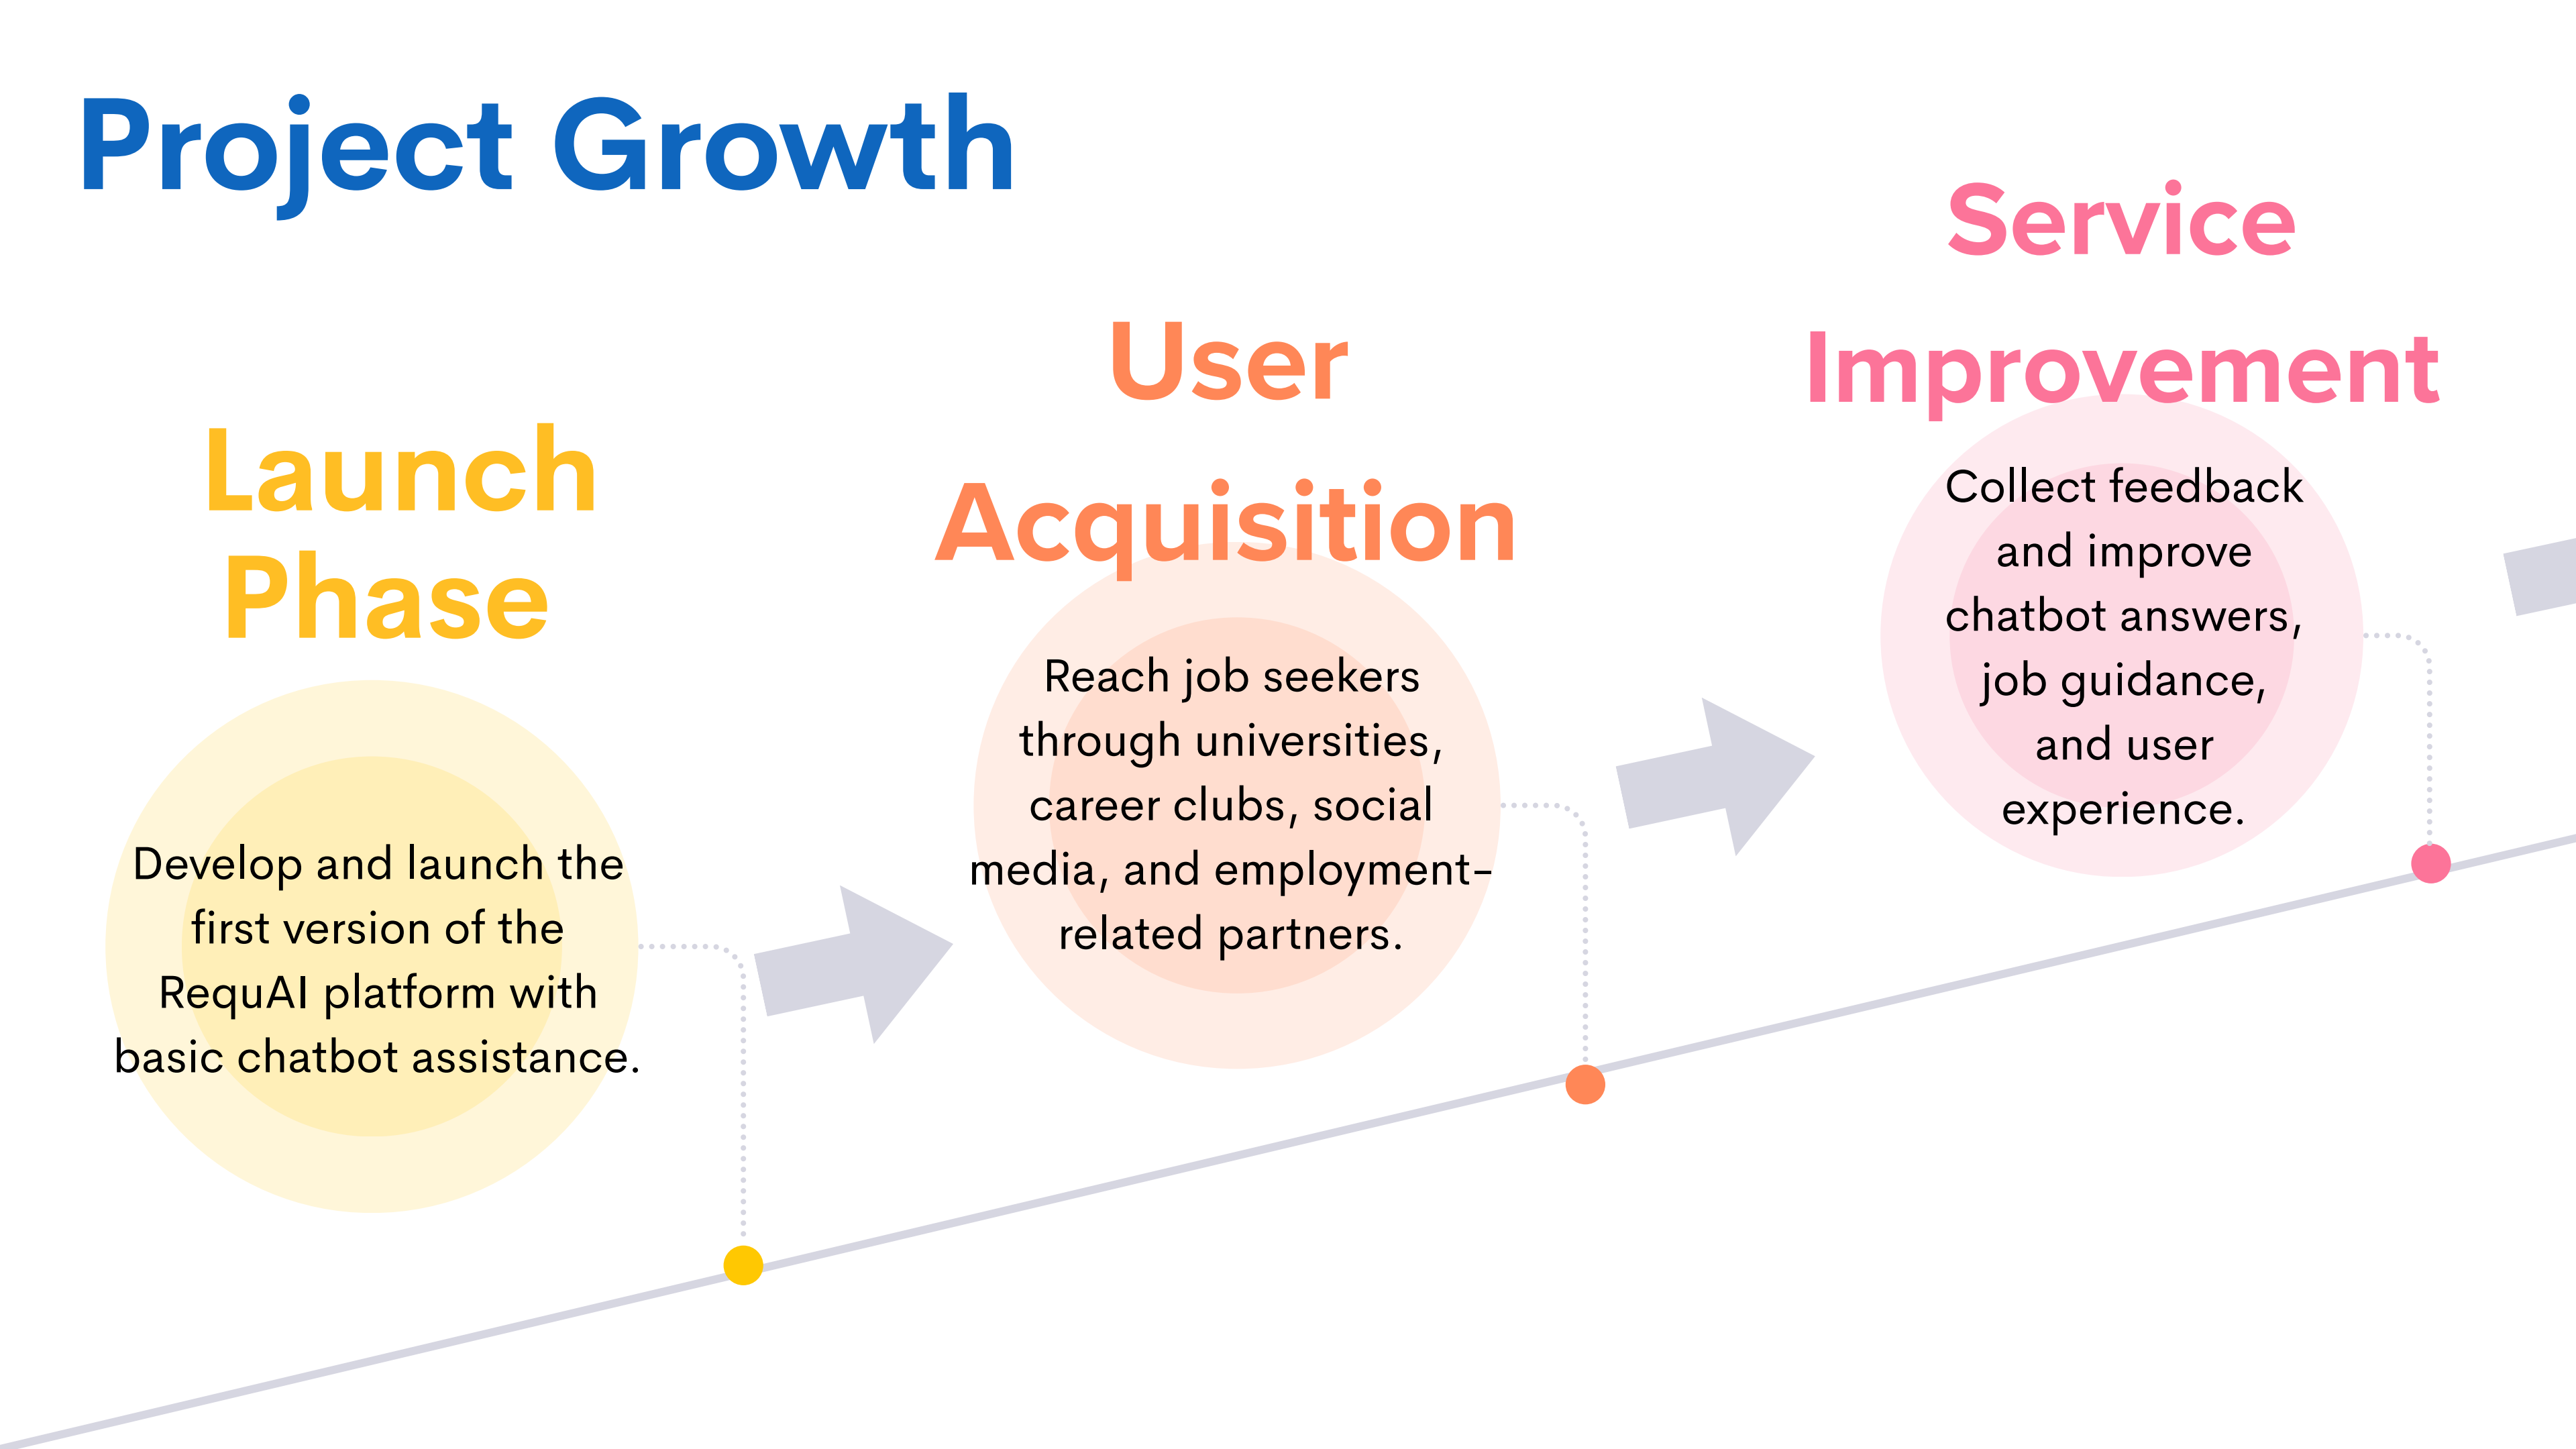

Acquisition

Improvement

Develop and launch the first version of the RequAI platform with basic chatbot assistance.

Reach job seekers through universities, career clubs, social media, and employment-related partners.

Collect feedback and improve chatbot answers, job guidance, and user experience.

Project Growth

Future Expansion

Advanced Features

Partnership Development

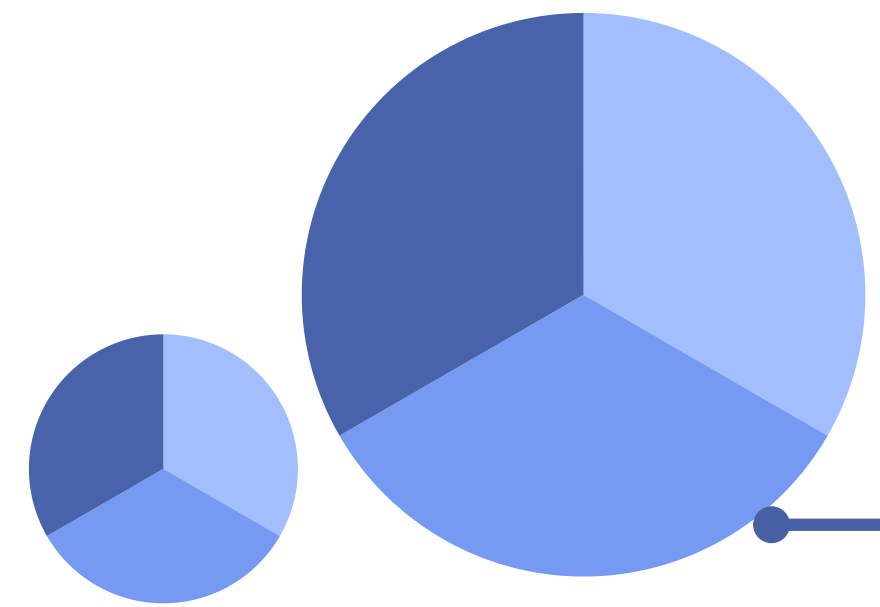

Build collaborations with employment agencies, training centers, universities, and support organizations.

Improve CV analysis, skill extraction, job matching, and personalized recommendations.

Add employer-side services such as job offer publishing, recruitment request management, and candidate communication.

Costs

Main Initial Costs

Administrative and Legal Setup

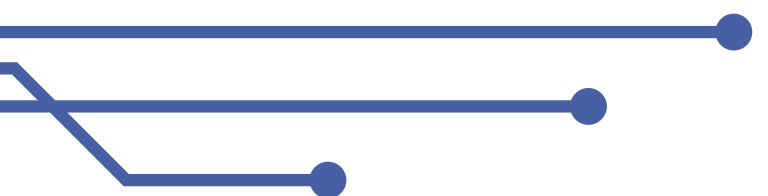

Registration procedures, legal consultation, project name and logo protection.

Technical Costs

Domain name, hosting, development tools, platform development, data processing, and prototype testing.

Communication and Support

Branding, presentation materials, marketing, transport, meetings, and recruitment content preparation.

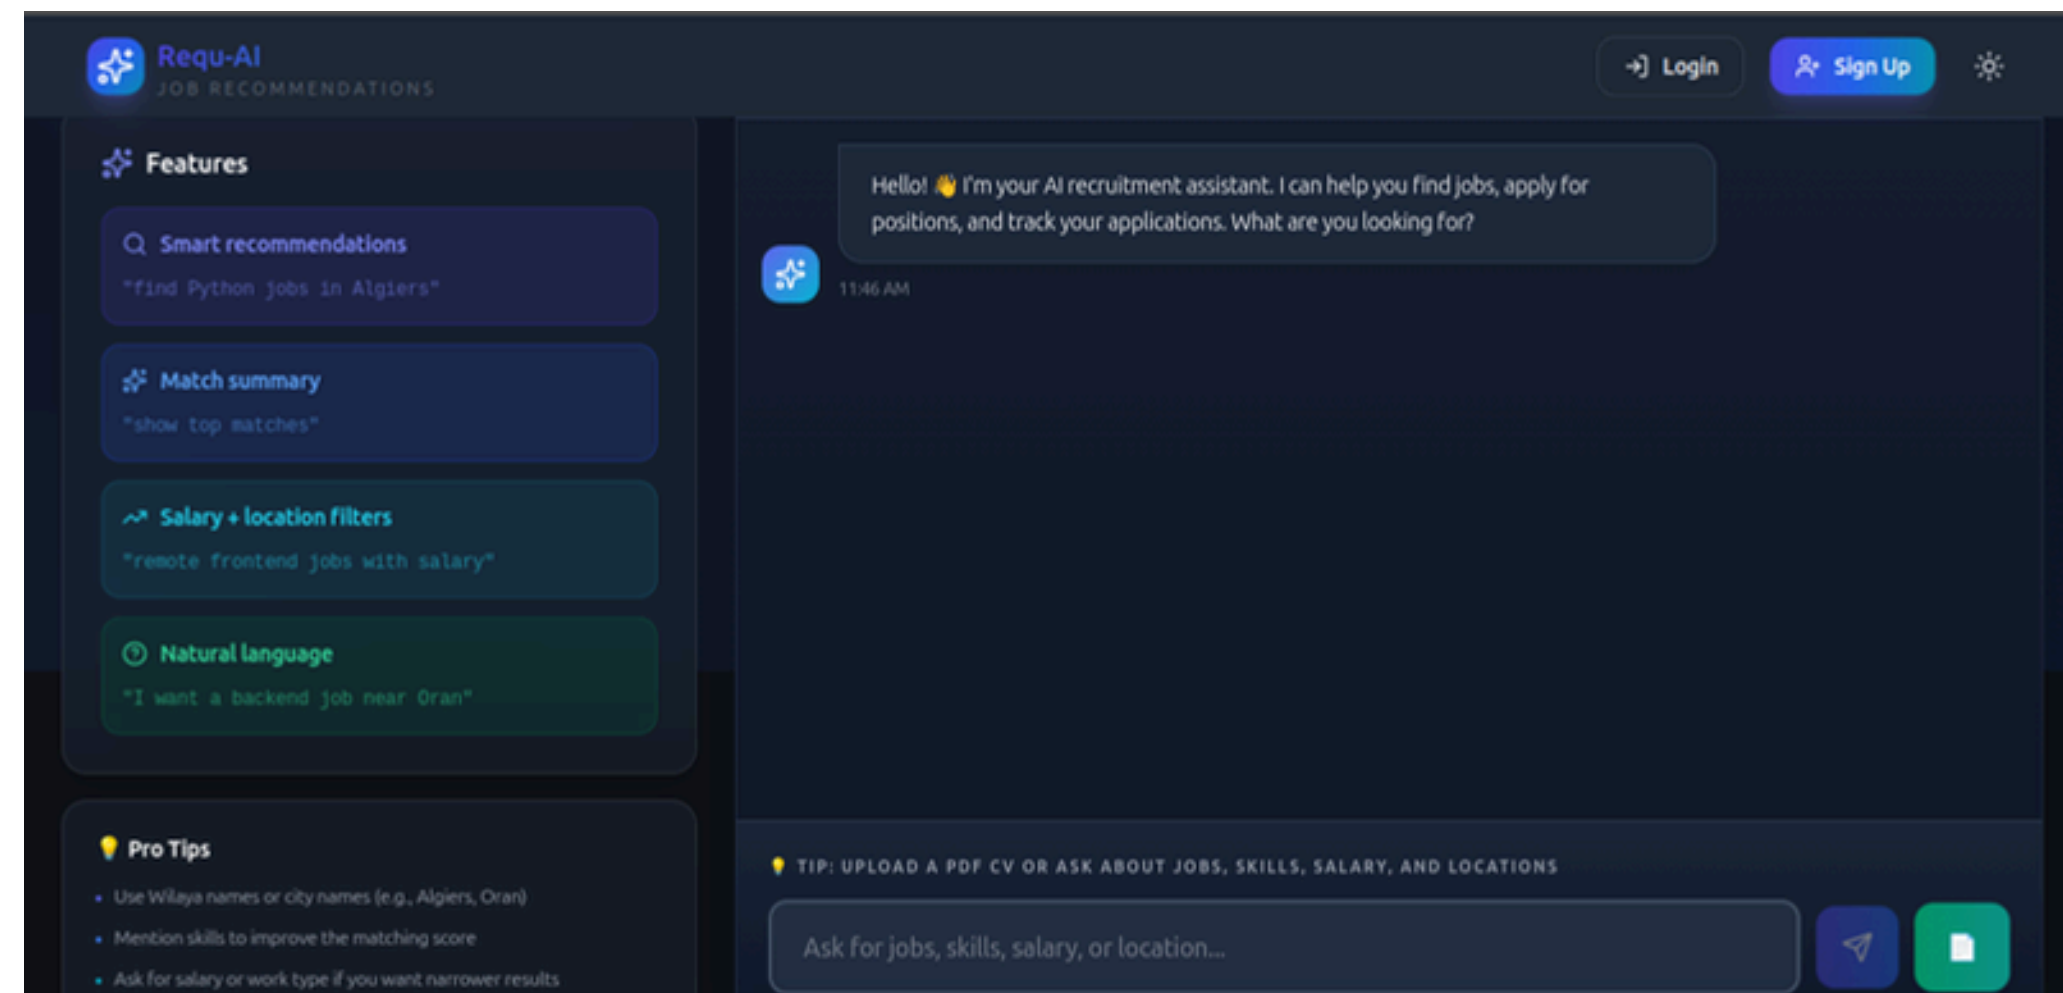

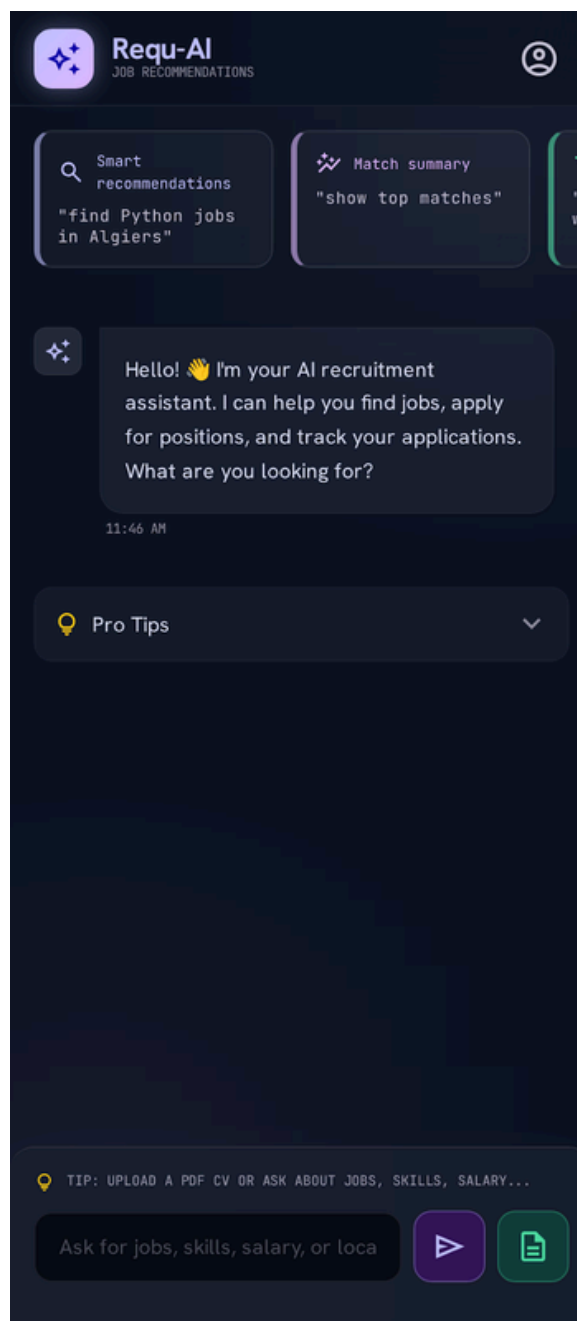

Future Perspectives

RequAI aims to become a national smart recruitment assistant, helping job seekers across Algeria access clearer guidance, better job matching, and personalized employment support.

Prototype Screenshots

The first prototype includes a web version and a mobile version of the RequiAI chatbot. The interface allows job seekers to interact with Requi, ask questions, search for jobs, receive recommendations, and get recruitment guidance in a simple digital environment
