

RequAI

AI-Powered Employment Platform

with Bias Detection & Fairness Engine

MARKET ANALYSIS

Business Plan — Section 3

Prepared: May 2026 · Version 1.0

Confidential — For Investor Review Only

"RequAI is the first multilingual AI employment assistant purpose-built for the Algerian and MENA job market, delivering bias-aware job matching, ANEM procedural guidance, and explainable fairness scoring across Arabic, Darija, French, and English."

SECTION 1

Key Industry Information

The global AI-powered recruitment and employment technology sector is one of the fastest-growing verticals in enterprise software. Driven by the universal need to reduce hiring friction, improve candidate quality, and address documented concerns around algorithmic fairness, this market sits at the convergence of three powerful macro-trends: the AI transformation of enterprise workflows, the global push for equitable hiring, and the digital modernisation of government employment services.

1.1 Industry Size & Scope

Multiple independent market research firms converge on a consistent picture. The broad AI-in-HR category — encompassing sourcing, screening, interviewing, people analytics, and workforce planning — reached **\$8.16 billion globally in 2025** and is projected to reach **\$15.24 billion by 2030**, representing a CAGR of 24.8% (Grand View Research, 2025).

The narrower segment of dedicated AI recruiting software — the direct competitive space for RequAI — is valued between **\$596 million and \$707 million in 2025**, forecast to exceed **\$1.1 billion by 2031** at a steady 7.0–7.5% CAGR (Mordor Intelligence; Straits Research, 2025). The broader recruitment software market (including non-AI systems) reached \$2.38 billion in 2024, with a projected value of \$3.7 billion by 2033 (IMARC Group, 2024).

1.2 Growth Drivers

- › **Automation demand:** AI can reduce recruiter screening time by 40%+ and compress average time-to-hire from 27 days to 7 days, creating compelling ROI for employers of all sizes.
- › **Algorithmic fairness imperative:** The EU AI Act (effective August 2026) classifies AI hiring tools as 'high-risk,' mandating bias audits, explainability, and human oversight. New York City's AEDT law and EEOC guidance in the US signal a global tightening of fairness requirements, creating strong demand for compliance-ready platforms.
- › **MENA & emerging-market expansion:** Asia-Pacific is the fastest-growing region at 19.18% CAGR (Mordor Intelligence). The MENA region, including Algeria, is experiencing accelerated digitalisation of labour markets with underserved populations and limited localised solutions.

- › **Government digitisation:** National employment agencies worldwide — including Algeria's ANEM — are under pressure to modernise. Algeria's ANEM processed over 2.8 million youth unemployment registrations digitally, yet candidate drop-off rates remain high due to poor UX and lack of intelligent matching.
- › **Agentic AI inflection:** Gartner flags 2026 as the single biggest inflection point in AI recruitment: 82% of HR leaders plan to deploy agentic AI in HR by mid-2026, enabling autonomous multi-step workflows far beyond today's screening tools.

1.3 Emerging Trends

Trend	Description	Relevance to RequAI
Bias Detection as Feature	35% of recruiters worry AI excludes unique candidates; 18% cite algorithmic bias as main AI danger (Tidio, 2025).	RequAI's core fairness engine directly addresses this by scoring matching equity.
Multilingual NLP	Character-level models increasingly used to handle morphologically complex languages (Arabic, Darija, Tamazight).	RequAI supports 4 languages natively, fine-tuned for local dialects.
Explainable AI (XAI)	EU AI Act mandates audit trails and candidate notifications for high-risk hiring AI systems.	RequAI logs bias scores and provides explicit feedback deltas.
RAG-powered FAQ Bots	Retrieval-augmented generation enables grounded, accurate responses to complex procedural queries.	RequAI's RAG layer covers all ANEM administrative workflows.
Agentic HR Workflows	Workday acquired Paradox (Oct 2025); Salesforce acquired Moonhub (Jun 2025). Consolidation accelerating.	Creates an open white space for a MENA-first agile player before global giants localized.

SECTION 2

Target Market Data

RequAI operates in a clearly defined geographic and demographic niche: the Algerian and broader MENA employment ecosystem. Algeria presents a uniquely compelling first-market opportunity due to the scale of its unemployment challenge, the digital maturity gap in its employment infrastructure, and the complete absence of any localized, multilingual AI-native solution.

2.1 Primary Customer Segments

SEGMENT A: Job Seekers

Profile: Young Algerians (19–40) seeking formal employment, ANEM-registered, highly digitally connected but systemically underserved by existing platforms.

Volume: Over 2.83 million registered ANEM beneficiaries; 30%+ youth unemployment rate (ages 15–24, Statista 2025).

Pain Points: Opaque rejection processes, complete lack of multilingual dialect support, lack of salary transparency, and structural hiring bias.

SEGMENT B: Employers / HR Teams

Profile: Private SMEs and mid-market Algerian businesses (10–500 employees) seeking compliant, optimized, and localized hiring workflows at scale.

Volume: ~1.1 million registered corporate entities in Algeria; 44% of global HR executives now leverage AI tools for recruiting (Tidio, 2025).

Pain Points: Overwhelming manual CV screening, regulatory uncertainty around AI fairness, and absence of DZD-native salary benchmarking.

2.2 Ideal Customer Profile — Job Seeker (B2C)

Attribute	Detail Target Baseline
Age Range	19 – 40 years (median national age in Algeria: 28.5 years).
Location	Primarily urban and industrial wilayas: Algiers, Oran, Constantine, Annaba, Sétif; expanding across all 58 wilayas.
Education	Baccalauréat to Master's degree; significant BTS/DUT populations; first-time job seekers (primo-demandeurs).
Income / Status	Unemployed or underemployed; SNMG-referenced baseline earnings (DZD 20,000/month floor); eligible for DAIP/CPE programs.
Language Blend	Arabic (Darija dialect primary for interaction), French (frequent in business context), and growing demand for English.

Attribute	Detail Target Baseline
Digital Behaviour	Mobile-first smartphone penetration; WhatsApp/Facebook-primary; active users of state digital portals despite UX friction.
Psychographics	Value transparency and institutional trust; skeptical of opaque selection loops; actively seek fair, metrics-backed validation.

2.3 Key Pain Points Addressed by RequAI

1. Lack of Multilingual Support

Existing ATS and global job portals operate strictly in rigid French or English. Local Darija-speaking applicants face heavy communication barriers, generating high drop-off rates on state portals like [minha.anem.dz](#).

2. Opaque Algorithmic Selection

Candidates receive no structural feedback on why they are filtered out. RequAI provides explicit explainable deltas and bias transparency metrics to guide the user constructively.

3. Total Salary Opacity

No reliable DZD-denominated salary data index exists for private sector calibration. RequAI embeds an Algerian Salary Table adjusted by wilaya and experience matrix.

4. Administrative & Procedural Complexity

Navigating ANEM registrations, CPE, DAIP, and CNAC workflows currently requires intensive manual guidance. RequAI integrates a comprehensive RAG-powered query layer to parse bureaucracy instantly.

SECTION 3

Target Market Size

Market sizing for RequAI follows a robust bottom-up methodology anchored in verified Algerian labour market registries and private sector density, cross-referenced with emerging-market software capitalization ratios. The market is structured across three concentric tiers:

3.1 Market Sizing Tiers (TAM, SAM, SOM)

Market Tier	Definition	Estimated Value	Analytical Basis
TAM Total Addressable	Total volume of AI recruitment, screening, and HR automated spending across the broader MENA region (including GCC & North Africa).	\$820M – \$1.1B	MENA represents roughly 12-14% of global digital HR software demand; scaled from the \$703M specialized AI recruiting baseline.
SAM Serviceable Addressable	Total target spend across Algeria and francophone North Africa covering active corporate HR, state agency digital extensions, and job-seeker premium tools.	\$85M – \$120M	Calculated on 2.83M active ANEM registrants multiplied by a DZD 3,000 (~\$22) localized annual spending index, plus mid-market corporate software ARR.
SOM Serviceable Obtainable	Targetable market share within the initial 36 months post-launch, capturing urban tech-literate job seekers and key private sectors in top 5 wilayas.	\$6M – \$12M	Assumes an achievable 5% to 10% penetration rate of the localized Algerian addressable market segment based on historical MENA fintech adoption paths.

3.2 Revenue Stream Mapping

The monetization structure deploys a dual-engine architecture designed to extract value from both sides of the employment market while keeping the baseline entry threshold fully accessible.

Revenue Segment	Target Unit Type	Pricing Structure (DZD / USD)	Billing Model
B2C Premium Tier	Individual Job Seekers	DZD 400 - 800 / month (\$3 - \$6)	Monthly Recurring Subscription
B2B Core SaaS	SMEs (10-250 employees)	DZD 15,000 - 45,000 / month (\$110 - \$330)	Annualized Contract Value (ACV)
B2B Enterprise / Gov	Mid-market & State Agencies	Custom Tier (DZD 250,000+)	Milestone & License API Volume

This structured approach isolates RequAI from direct macro fluctuations while addressing a severe, unserved legislative and linguistic gap in North Africa. Continuous localized optimization of the platform's core Retrieval-Augmented Generation layer ensures a defensible technical moat over generic international competitors.
